

## CASE STUDY

# Ecommerce application for the textile sector

### Challenge

Moving warehouse racks with a flexible and safe system for quicker SKU picking

See AGVs in action

## Automation of the picking process

- The AGVs feature compact design, are equipped with a lifting table and are guided by QR codes.
- With its excellent manoeuvrability, our EBOT 350 guarantees a fast and efficient moving of racks from the stock to the picking area and viceversa. This allows a simple access to multiple SKUs.
- This system's advantage is its scalability, which enables our customer to adapt to the seasonality of the market (such as Black Friday, Cybermonday, Christmas).

These AGVs offer a collaborative solution thanks to their 360° protection which enables safe and reliable interactions with operators.

Installation of 30 EBOT 350 AGVs in the logistics warehouse.
