

Vicinay

Challenge

Create an ergonomic solution to simplify the transport of special loads up to 3Tn

Automation of final product movements at the end of line

- The vehicle communicates with the machines for picking up and dropping off the goods, allowing the optimization of operations and just in time delivery.
- The system is equipped with the safety elements for a completely safe and reliable transport, as well as with magnetic guidance that allows a high stopping accuracy.

In addition, a remote control system has been incorporated to allow full traceability of the process and facilitate maintenance operations.

Given its ability to move in any direction, loading and unloading insertion tasks have been made easier and space-saving.
